20 GitHub Copilot Prompts for Test Engineers

[PLACEHOLDER DOCUMENT — replace this content with your own 20 prompts before publishing. The structure and categories below are provided as a starting template.]

Requirements & Risk Analysis

Given this requirement: "[paste requirement]", list the top 5 risk areas a QA engineer should investigate before writing tests.

Identify ambiguous or untestable statements in this requirement: "[paste requirement]".

Suggest edge cases I might be missing for this user story: "[paste story]".

Test Design

Convert this requirement into Given/When/Then test scenarios: "[paste requirement]".

Generate boundary value test cases for this input field: "[field description, e.g. age 18-65]".

Suggest a risk-based priority order for these test cases: "[paste list]".

Automation

Write a Playwright test for this scenario: "[paste scenario]".

Refactor this test to remove duplication: "[paste test code]".

Suggest a Page Object structure for this flow: "[describe flow]".

API Testing

Generate test cases (happy path + edge cases) for this endpoint: "[method + path + description]".

Write a Postman/REST-assured test for this API contract: "[paste contract]".

Defect Analysis

Given this bug report: "[paste report]", suggest 3 likely root causes and where to look in the codebase.

Summarize this stack trace and point to the most likely failing component: "[paste stack trace]".

Reporting

Summarize this test run's results into a short status report for stakeholders: "[paste raw results]".

Turn these open defects into a prioritized risk summary for a release go/no-go call: "[paste defect list]".
